

# INTRODUCTION TO ORGANIC CHEMISTRY

IB Chemistry

Topic 10 – Organic

Modified From:

Larry Scheffler, LHS, OR

# Orgins

- ◆ Originally defined as the chemistry of living materials or originating from living sources
- ◆ Wohler synthesized urea from non organic sources
- ◆ Now generally defined as the chemistry of carbon and its compounds

# Carbon Characteristics

- ◆ Electron configuration  $1s^2 2s^2 2p^2$
- ◆ Four valence electrons
- ◆ Hybridization
- ◆ Forms four bonds with other atoms including other carbon atoms
- ◆ Able to **catenate** – form chains and rings
- ◆ Able to form multiple bonds

# Carbon is Unique

- ◆ More than 90% of all known compounds are carbon compounds and therefore organic
- ◆ Living systems are all carbon based
- ◆ Carbon has unique characteristics that make multiple compounds possible

# Unique Characteristics of Carbon

- ◆ Can form multiple bonds to itself and others
- ◆ Strength of C-C bond is large compared to that of other like atom-atom bonds.
- ◆ Carbon can form chains and rings
- ◆ Carbon cannot expand its octet of valence electrons.

# Bonding in ethene

# Classifying Organic Compounds

- ◆ Many configurations of carbon atoms are possible in a molecule
- ◆ Empirical and molecular formulas are the same for many different compounds
- ◆ The relative locations of various combinations of atoms in a formula is very important
- ◆ Structural formulas show the location and bonding pattern for each atom in a formula

# Structural Formulas

- ◆ The three molecules below both have the same empirical and molecular formulas but they have very different characteristics. They are considered different compounds.

# Functional Groups

	$\text{—OH}$	<b>R-OH</b>	$\text{CH}_3\text{—CH}_2\text{—OH}$
	$\begin{array}{c} \text{O} \\ \parallel \\ \text{—C—H} \end{array}$	$\begin{array}{c} \text{O} \\ \parallel \\ \text{R—C—H} \end{array}$	$\begin{array}{c} \text{O} \\ \parallel \\ \text{CH}_3\text{—C—H} \end{array}$
	$\begin{array}{c} \text{O} \\ \parallel \\ \text{C—C—C} \end{array}$	$\begin{array}{c} \text{O} \\ \parallel \\ \text{R—C—R} \end{array}$	$\begin{array}{c} \text{O} \\ \parallel \\ \text{CH}_3\text{—C—CH}_3 \end{array}$
	$\text{C—O—C}$	<b>R-O-R</b>	$\text{CH}_3\text{CH}_2\text{—O—CH}_2\text{CH}_3$

# Functional Groups

Carboxylic Acid	$\text{—}\overset{\text{O}}{\parallel}\text{C}\text{—OH}$	$\text{R—}\overset{\text{O}}{\parallel}\text{C}\text{—OH}$	$\text{CH}_3\text{CH}_2\text{—}\overset{\text{O}}{\parallel}\text{C}\text{—OH}$
Amide	$\text{—}\overset{\text{O}}{\parallel}\text{C}\text{—NH}_2$	$\text{R—}\overset{\text{O}}{\parallel}\text{C}\text{—NH}_2$	$\text{CH}_3\text{—}\overset{\text{O}}{\parallel}\text{C}\text{—NH}_2$
Amine	$\text{—C—NH}_2$	$\text{R—NH}_2$	$\text{CH}_3\text{CH}_2\text{—NH}_2$
Amino acid	$\begin{array}{c} \text{O} \\ \parallel \\ \text{—C—C—OH} \\   \\ \text{N} \end{array}$	$\begin{array}{c} \text{O} \\ \parallel \\ \text{R—C—C—OH} \\   \quad   \\ \text{H} \quad \text{N} \quad \text{H} \end{array}$	$\begin{array}{c} \text{O} \\ \parallel \\ \text{CH}_3\text{CH}_2\text{—C—C—OH} \\   \quad   \\ \text{H} \quad \text{N} \quad \text{H} \end{array}$

# Functional Groups

Ester	$\begin{array}{c} \text{O} \\ \parallel \\ -\text{C} - \text{O} - \text{C} \end{array}$	$\begin{array}{c} \text{O} \\ \parallel \\ \text{R} - \text{C} - \text{O} - \text{R} \end{array}$	$\begin{array}{c} \text{O} \\ \parallel \\ \text{CH}_3\text{CH}_2 - \text{C} - \text{O} - \text{CH}_3 \end{array}$
Thiol	-S-H	R- SH	CH <sub>3</sub> CH <sub>2</sub> -SH

# Functional Groups

- Many larger molecules have more than one functional group.

Acetylsalicylic acid  
Aspirin

Acetoaminophen  
(Tylenol)

# Functional Groups

- The physical and chemical properties of organic compounds are related to their functional groups.
- Compounds may have different numbers of carbon atoms but the same functional group(s) will often have similar properties.

# Homologous Series

- ◆ Compounds that have the same general formula but differing lengths of carbon chains form a homologous series

# Homologous Series: Ex 1

$\text{CH}_4$  Methane

$\text{C}_2\text{H}_6$  Ethane

$\text{C}_3\text{H}_8$  Propane

$\text{C}_4\text{H}_{10}$  Butane

$\text{C}_5\text{H}_{12}$  Pentane

A homologous series  
of alkanes

# Homologous Series: Ex 2

$C_2H_4$	<b>Ethene</b>
$C_3H_6$	<b>Propene</b>
$C_4H_8$	<b>1-Butene</b>
$C_5H_{10}$	<b>1-Pentene</b>

A homologous series  
of alkenes

# Homologous Series: Ex 3

**Methanol**

**Ethanol**

**1-Propanol**

**1-Butanol**

**1-Pentanol**

A homologous series  
of alcohols

# Hydrocarbons

- ◆ Hydrocarbons are organic compounds that are made up of only carbon and hydrogen.
- ◆ There are several different categories of hydrocarbons including:
  - Alkanes
  - Alkenes
  - Alkynes
  - Cyclic Hydrocarbons
  - Aromatic hydrocarbons

# Alkanes

◆ Alkanes are hydrocarbons that have only C-C single bonds.

◆ Examples

- Methane  $\text{CH}_4$
- Ethane  $\text{CH}_3\text{-CH}_3$
- Propane  $\text{CH}_3\text{-CH}_2\text{-CH}_3$
- Butane  $\text{CH}_3\text{-CH}_2\text{-CH}_2\text{-CH}_3$
- Pentane  $\text{CH}_3\text{-CH}_2\text{-CH}_2\text{-CH}_2\text{-CH}_3$
